List people with overdue security tasks

Query a list of current employees with overdue security tasks

List People with OVERDUE Tasks

This guide will help you list people who have tasks with the status OVERDUE using the Vanta API.

Steps:

- Authenticate with the Vanta API.
- Use the ListPeople endpoint with the appropriate query parameters to filter for overdue tasks.
- Handle the response post request and filter records by employee status.

List People Endpoint

This endpoint retrieves a list of people in your Vanta instance, optionally filtered by task status.

Endpoint:

`/people`

Query Parameters:

- `taskTypeMatchesAny` (optional): `<stringEnum>` Filter people by task type. This param represents a task type and can be any of the following below:

taskTypeMatchesAny values

```
- COMPLETE_TRAININGS
- ACCEPT_POLICIES
- COMPLETE_CUSTOM_TASKS
- COMPLETE_CUSTOM_OFFBOARDING_TASKS
- INSTALL_DEVICE_MONITORING
- COMPLETE_BACKGROUND_CHECKS
```

- `taskStatusMatchesAny` (optional): `<stringEnum>` . This param is required when also using `taskTypeMatchesAny` . Filter people by task status. To list people with overdue tasks, use OVERDUE. This param can be any of the following:

taskStatusMatchesAny values

```
- COMPLETE
- DUE_SOON
- OVERDUE
- NONE
```

For any Security Tasks with an Overdue status, use the following Query Parameters:

```
&taskTypeMatchesAny=COMPLETE_BACKGROUND_CHECKS
&taskTypeMatchesAny=ACCEPT_POLICIES
&taskTypeMatchesAny=COMPLETE_CUSTOM_TASKS
&taskTypeMatchesAny=COMPLETE_TRAININGS
&taskTypeMatchesAny=INSTALL_DEVICE_MONITORING
&taskStatusMatchesAny=OVERDUE
```

- **`pageSize`** (`<number>`): An integer value that specifies the number of resources to return per page.
- **`pageCursor`** (`<string>`): A string value used to navigate through pages of results.

List People - Code Example

cURL Javascript - Fetch NodeJS - Axios Python - Requests

```
curl --location 'https://api.vanta.com/v1/people?
pageSize=50&pageCursor=%3Cstring%3E&taskTypeMatchesAny=COMPLETE_BACKGROUND_CHECKS&taskTypeMatchesAny=ACCEPT_POLICIES&taskTypeMatchesAny=COMPL
\
--header 'Accept: application/json' \
--header 'Authorization: Bearer vat_YOUR_TOKEN_HERE'
```

List People - Example Response

For a detailed breakdown of the fields in the response object below see this guide.

Example Response

```

                                },
                                {
```

```
                                "name": "GDPR_SECURITY_TRAINING"
                            },
                            {
                                "name": "CCPA_SECURITY_TRAINING"
                            }
                        ]
                    },
                    "completeCustomTasks": {
                        "taskType": "COMPLETE_CUSTOM_TASKS",
                        "incompleteCustomTasks": [
                            {
                                "name": "CUSTOM_CHECKLIST_TASK"
                            },
                            {
                                "name": "CUSTOM_CHECKLIST_TASK"
                            }
                        ],
```

List People - Response Handling

The List People response includes all employees matching the task status query parameters used, including 'Former' employees. Use the `employment.status` property to determine the employees status, and filter accordingly.

NodeJS - Axios

```
const axios = require('axios');

let config = {
    method: 'get',
    maxBodyLength: Infinity,
    url: 'https://api.vanta.com/v1/people?pageSize=50&pageCursor=
<string>&taskTypeMatchesAny=COMPLETE_BACKGROUND_CHECKS&taskTypeMatchesAny=ACCEPT_POLICIES&taskTypeMatchesAny=COMPLETE_CUSTOM_TASKS&taskTypeMa
    headers: {
        'Accept': 'application/json',
        'Authorization': 'Bearer vat_TOKEN_HERE'
    }
};

axios.request(config)
    .then((response) => {
        let res = JSON.stringify(response.data);
        let resParse = JSON.parse(res);
        resParse.results.data.forEach((person) => {
            if (person.employment.status !== 'FORMER') {
                let personRecord = {
                    name: person.name.display,
                    tasks: []
                }
                let tasks = person.tasksSummary?.details;
                Object.values(tasks).forEach((task) => {
                    taskRecord = {
                        taskType: task.taskType,
                        status: task.status
                    }
                    personRecord.tasks.push(taskRecord);
                });
                console.dir(personRecord, { depth: null });
            }
        });
    })
    .catch((error) => {
        console.log(error);
    });
```

```
                                "name": "Alex Custom Policy"
                            }
                        ],
                        "acceptedPolicies": [
                            {
                                "name": "Secure Development Policy"
                            },
```

List People Response Handling - Example Output

Example Response

```
{
  name: 'admin admin',
  tasks: [
    { taskType: 'COMPLETE_TRAININGS', status: 'OVERDUE' },
    { taskType: 'COMPLETE_CUSTOM_TASKS', status: 'OVERDUE' },
    { taskType: 'COMPLETE_CUSTOM_OFFBOARDING_TASKS', status: 'NONE' },
    { taskType: 'COMPLETE_BACKGROUND_CHECKS', status: 'COMPLETE' },
    { taskType: 'ACCEPT_POLICIES', status: 'OVERDUE' },
    { taskType: 'INSTALL_DEVICE_MONITORING', status: 'NONE' }
  ]
},
{
  name: 'Ben Ben',
  tasks: [
    { taskType: 'COMPLETE_TRAININGS', status: 'COMPLETE' },
    { taskType: 'COMPLETE_CUSTOM_TASKS', status: 'NONE' },
```

```
      {
        taskType: 'COMPLETE_CUSTOM_OFFBOARDING_TASKS',
        status: 'COMPLETE'
      },
      { taskType: 'COMPLETE_BACKGROUND_CHECKS', status: 'NONE' },
      { taskType: 'ACCEPT_POLICIES', status: 'OVERDUE' },
      { taskType: 'INSTALL_DEVICE_MONITORING', status: 'NONE' }
    ]
  }
```
